# Web scrape Walmart using Postman API Platform

Steps to get the information from product page using Postman API
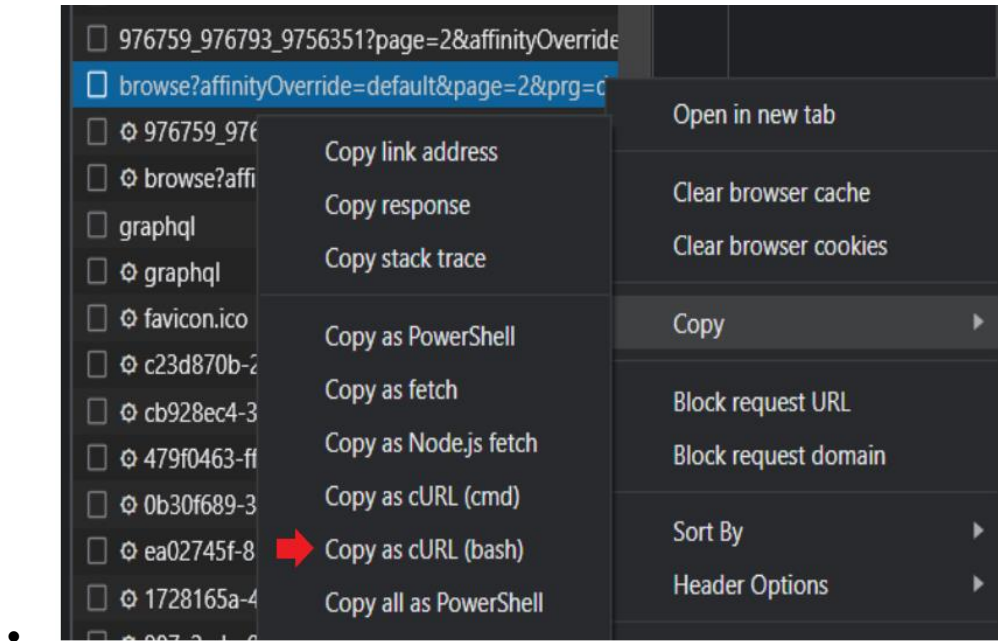

1. Navigate to product page. For example: https://www.walmart.com/browse/food/fresh-fruits/976759_976793_9756351?page=1&affinityOverride=default
2. Open developer mode and select network --> Fetch/XHR

- Refresh page to load information
- Scroll all the way to the bottom and click on a different page, scroll through the Name until you find:

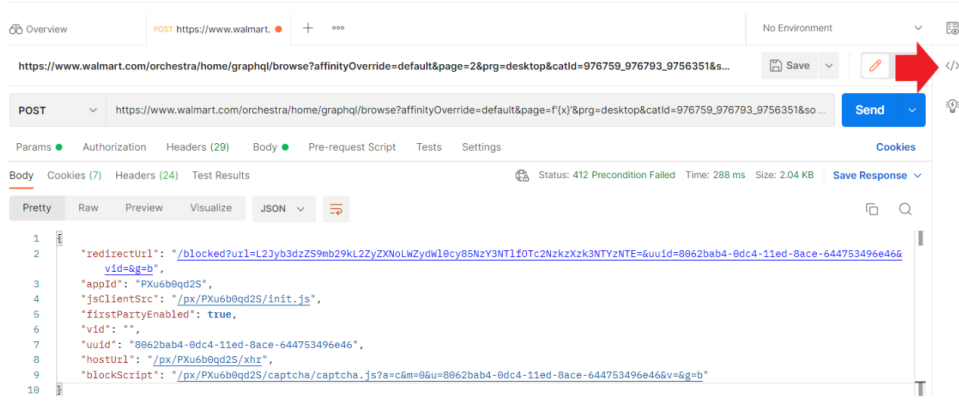

-
- Right click and select 'Copy as cURL(bash)'

3. Go to https://www.postman.com/
4. Sign up for an account (Free to use)
5. Navigate to your workspace (My Workspace)
6. Click on 'Import', select 'Raw Text' and past the cURL in the box and click 'Continue' and then 'Import'

7. Click on the '</>' symbol

8. Select 'Python - Requests' from the Code Snippet drop-down menu.
9. Copy the code snippet to your code editor.
10. Current script saved as auto_scraper.ipynb on Github.
